

## Village of Poland Traffic Signal Upgrades MAH-Poland Signal Upgrades, PID 107226

### Summary of Comments and Responses January 8, 2021

**1. What will be done with the signal at the intersection of Nesbitt and S. Main Street?**

The signal at this intersection is not warranted so it cannot be upgraded using the funds available this ODOT funded project. However, the Village Council voted to keep the signal active and any improvements at this intersection will be at the Village's expense.

**2. I am concerned with traffic detectors' sensitivity picking up bicyclists and motorcycles stopped at signal locations.**

The traffic engineers will review the sensitivity of the traffic detectors to verify that it functions for all anticipated vehicle types.

**3. What are the replacement signals going to look like? Is there a selection of styles that the Poland Village Council will be able to choose from?**

The below is a photo of a recently completed similar project which included the standard black painted poles, mast arms, signal heads, and control cabinets. This style is the ODOT standard that is included in the project funding. If the Poland Village Council wanted anything different it would increase the village's cost substantially.
